

# Technology Milestones

## Technology Milestones

In tune with the overall long-term aspirations of Cerebrus, we have crossed the following milestones on the Technology Front in the past few years.

- Prototype built for a Back Office Derivatives Application on the ASP Implementation Model in December 2000 &ndash; February 2001.
- Various Implementation Models studied in an in-depth manner between April & May 2001. The performance Benchmarks of this Model, on our Back Office Applications, has been tabulated for internal reference. These Performance Benchmarks have also been conducted on the Broadband connectivity options.
- Study of various &ldquo;Server Based Computing&rdquo; Products & its Implementation Strategies completed between November 2001 & December 2001.
- External certification received for our System Administrators after the necessary training had been undergone on these Products in April 2002. Other than these specifics, we have been keenly following the happenings in the IDC/Data center arena, initially for Hosting our own applications & then to gain knowledge & Expertise on the "Hosted Applications" Business Line across Applications.
